

The Perfect Cup Of Coffee

There are many elements that go into brewing the perfect cup of coffee. Following these simple steps will further enhance your enjoyment of the perfect cup of coffee.

- Coffee is best kept fresh in a cool, dry environment. The coffees we feature are individually sealed and designed for ease of use.
- Too much water or not enough coffee causes over-extraction to occur. This is the major cause of bitter tasting coffee. Our products are pre-measured so there is never any guesswork as to how much is needed. Our brewers are calibrated to an exact water measurement that measures the proper water level each time.
- Ask any true coffee connoisseur and they will tell you fresh, cold water is the key. Harsh chemicals in your water source can seriously affect the quality of your cup of coffee. What better way to enjoy your coffee then brewed with great tasting (chemical-free) bottled water or filtered water from Amazon Springs.
- When you choose a coffee service provider, you're choosing more than just a cup of coffee. With our variety of products, equipment and services, we offer a complete beverage program designed for just for you and your staff. It's simple - pick your coffee selections and equipment you prefer and leave the rest to us. Treat your associates, guests, clients to a great cup of coffee. They will thank-you for it.
